

Pre-Mont Course

Research has consistently shown that a child's learning abilities and retention powers develop well enough at age 1.5 yrs for a child to start his/her education with Montessori materials. The Pre-Montessori course has been designed to meet the education and exploration needs of children between 1.5 yrs and 2.5 yrs. It is designed such that it is suitable to the younger students and helps them not only utilize the learning abilities which they have, but also helps them get a head-start in life compared to their peers.

The curriculum for a Pre-Montessori course is designed such that it is more oriented towards Group activities as younger children learn better in groups than by performing individual activities. The Pre-Montessori course also has a slightly higher component of play time to suit the needs of younger children.
